### **Crawling Ordering Strategy.**

**S. Sankar**

Abstract - Literature reported that search engines are playing a major important role in discovering information nowadays. Due to limitations of network bandwidth and hardware , search engines cannot obtain the entire information of the web and have to download the most important pages first. In this paper, A crawling ordering strategy is proposed, which is based on site rank, and compare it with several crawling ordering strategies. The objective of these strategies is to download the most important pages early during the crawl. Experimental results indicate that site Rank-based strategy can work efficiently in discovering important pages under the Page Rank evaluation of Page quality.
