Wlan for Web Based Assignment

D . Balaji

Abstract - It has been observed from literature that in this contemporary and ever changing world , technology plays a vital role in all the fields . Education is like an industry facing lot of changes in teaching, learning and evaluation methodologies . The biggest problem faces by an educational institution are show to provide its students and best environment with latest tools and techniques within a cost effective framework. Apart from the environment , the tools, which the institution uses, should be comfortable and easy to use for the students and members of staff . Web based assignment management system is part of the Learning evaluation method and is the buzz word for the researches and universities throughout the world . This research tries to figure out how effectively Web Based Assignment Management System in the M-Learning environment can be implemented within the college campus with the help of WLAN. This paper describes a simple web based assignment management system, in order to assist the teaching faculty and students in the process of managing assignment submission during a mid-semester assessment process . It allows the natural processing flow of an assignment , from online submission to awarding marks and viewing the comments of the lecturer for that assignment Providing three differenr class of access , the ASP.NET , MS-SQL , application can offer various statistics regarding students, assignment, status, marks, comments and acceptance of the assignment .
